

## CELLULAR ON-GROUND DATA SERVICE PLAN RATES

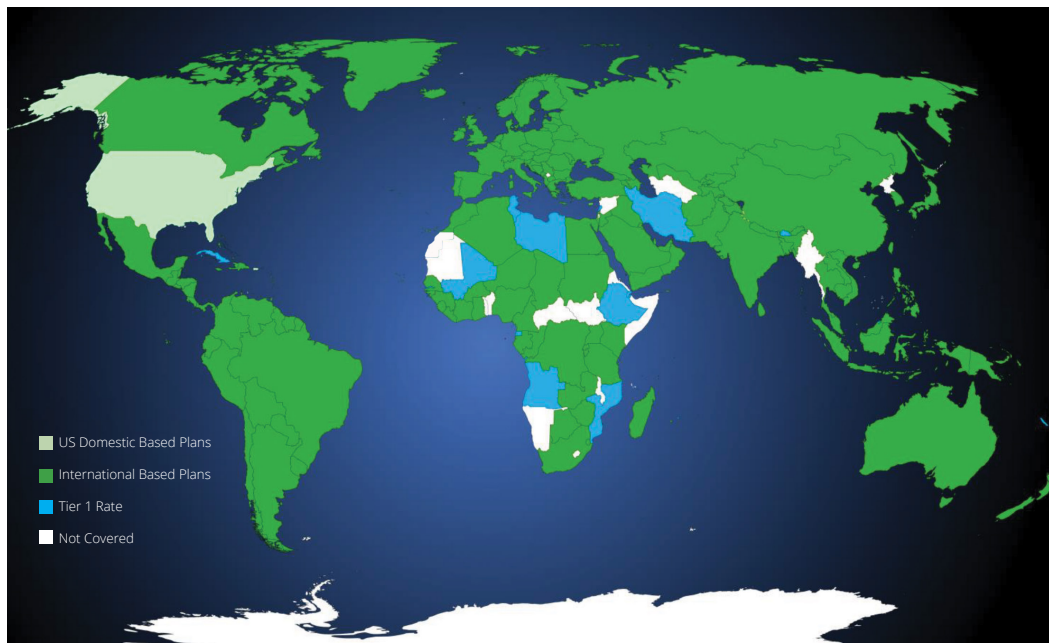

Satcom Direct (SD) offers the ultimate communication flexibility for the entire flight, in the air and on the ground. The Satcom Direct Router (SDR™) enables connectivity without interruption, even as you transition between in flight SATCOM and on-ground cellular networks.

SD has secured roaming agreements with terrestrial cellular network providers throughout the world. This allows you to access these networks wherever you land, whenever roaming partner coverage is available.

Billing is simple. Your usage in Basic International Rate countries is billed against your international package plan. Usage in the Tier 1 countries is billed based on the pricing tier to which that country belongs and does not apply toward your package plan. The complete list of countries is listed on the reverse side of this brochure.

NOTE: To avoid unwanted data charges, please ensure any Wi-Fi enabled devices are powered off or placed in airplane mode with Wi-Fi turned off for the duration of your trip.

### Service Country Coverage Map

Map depicts SDR cellular rates and supported countries. Due to scale, not all countries may be clearly identifiable on map. Please refer to the country-specific list for exact detail.

# Cellular On-Ground Data –Supported Countries

## Countries charged at US Domestic Rates
